

# Omexom – Expert services for electricity generation and transmission

Omexom is VINCI Energies' brand specialised in electrical power generation, transmission, transformation and distribution

## Omexom

50 years of experience in the design, implementation and maintenance of structures of generation, transmission, production, transport and energy conversion.

**Omexom** is a network of specialist business units to compose comprehensive offering in power transmission, transformation, distribution, public lighting and urban transport infrastructure.

In the United Kingdom & Republic of Ireland, Omexom designs, supplies and constructs high voltage electrical infrastructure solutions for utility and private operators throughout Great Britain and Ireland.

Omexom UK & Rol's scope of supply covers:

- Design
- Procurement
- Installation
- Commissioning
- Maintenance and
- Electrical consultancy
- Project Management

for both, substations and overhead lines from LV (Low Voltage) to 400kV.

With an overriding emphasis on safety, high quality projects are delivered on time and within budget.

Our project reference list covers many of the major electricity market players including Scottish and Southern Energy, Western Power Distribution, Central Networks and Electricity Supply Board.

In the renewables market, Powerteam has undertaken projects for companies such as Renewable Energy Systems, SSE Renewables and DONG Energy.

Projects delivered to private network owners include Digital Reality Trust, Multi Development, Northern Ireland Water, Michelin and the Quinn Group.
